

Adrenalin® Injection

NDC 42023-0159-25 25 Single Dose Vials x 1 mL each

Dear Valued Customer,

The purpose of this letter is to reiterate the need for end users of Adrenalin® 1 mL to closely adhere to the Storage and Handling instructions listed within the Package Insert. The Storage and Handling instruction section states Epinephrine is light sensitive and to protect product from light and freezing.

“Store between 20° to 25°C (68° to 77°F) [See USP Controlled Room Temperature]. Epinephrine is light sensitive. Protect from light and freezing.”

“Inspect visually for particulate matter and discoloration prior to administration. Do not use the solution if it is colored or cloudy, or if it contains particulate matter.”

In April 2019 we began to package our Adrenalin® 1 mL Single Dose Vial product in a light protective carton, as shown below.

Light Protective Carton

This carton was specifically designed to provide the product with an additional protection from any exposure to light. It is important that end users only remove the product from the light protective carton when ready to use it. Removing the product from, and storing the product outside of, the light protective carton may lead to light exposure and product degradation.

If you have specific questions regarding Handling and Storage please review the Package Insert under Section 16 (HOW SUPPLIED/STORAGE AND HANDLING). For more information, please contact Par Pharmaceutical at:
